B.E.P.Q. 578-13

SUMMARY OF STATE NURSERY-STOCK SHIPPING REQUIREMENTS AND PLANT
QUARANTINES AND REGULATIONS AFFECTING INTERSTATE SHIPMENTS

KENTUCKY

The information contained in this summary was compiled from material received from the plant quarantine official of Kentucky and has been approved by him. It is issued for the convenience of plant quarantine inspectors, shippers, transportation agents, truckers, and others concerned in the interstate movement of plants, plant products, and other materials subject to State regulation on account of plant pests.

The summary for Kentucky gives the general requirements for shipping nursery stock into that State, as well as digests of the State plant quarantines and regulations affecting interstate shipments. An appendix furnishes information on post-office requirements for mailing plants as well as terminal-inspection procedure. This summary does not include digests of nursery-stock or plant-quarantine requirements relating to the movement of plants entirely within the State.

The information contained in this circular is believed to be correct and complete up to the time of preparation, but it is not intended to be used independently of or as a substitute for the original texts of the regulations and quarantines, and it is not to be interpreted as legally authoritative. For detailed information address the State Entomologist, College of Agriculture, University of Kentucky, Lexington 29, Kentucky.

In addition to State requirements, shippers will need to take into consideration applicable plant quarantines of the United States Department of Agriculture. In most instances these quarantines regulate the interstate movement of specified plants, plant products, and other articles from designated regulated areas. However, some of these quarantines regulate the interstate movement of certain articles into designated protected areas. Copies of such quarantines may be obtained from the Bureau of Entomology and Plant Quarantines, Washington 25, D. C.

W. R. Popham

Acting Chief, Bureau of Entomology and
Plant Quarantines

KENTUCKY

Summary of General Nursery-Stock Shipping Requirements
(Ky. Laws 1926, as amended 1946; Gen. Stat., Revised 1940)

Definition of Nursery Stock.--All trees, shrubs, vines; roses; strawberry, raspberry, and blackberry plants; herbaceous perennial plants and roots; ornamental bulbs, corms, tubers, and rhizomes; and any parts of the above groups of plants capable of disseminating injurious insects and plant diseases. For regulatory purposes the term, "nursery stock," includes all plants which grow outdoors and live more than one year, whether nursery-grown or native.

General Shipping Requirements.--Any nonresident nurseryman, dealer, or agent desiring to do business in Kentucky should annually file credentials with the State Entomologist, who will issue a permit if credentials are satisfactory. A charge of \$5 is made for a dealer's license. The nurseryman must file a copy of his nursery inspection certificate, and dealers and agents must list the names of nurseries, nurserymen, or other persons represented. Nonresident nurserymen, dealers, and agents must carry their permits when doing business in Kentucky. All certificates and permits expire on June 30 following date of issue.

Each container of nursery stock moving into Kentucky must have attached a copy of the inspection certificate of the State of origin. Transportation companies within the State must notify the State Entomologist when any uncertified shipment is received by them. Nursery stock or other plants or plant parts shipped into Kentucky in violation of a State or Federal quarantine may be seized and destroyed or returned to the shipper.

Summary of State Plant Quarantines

Alfalfa Weevil

(Quarantine No. 2 (Revised), effective Dec. 15, 1941)

The movement into Kentucky of alfalfa hay, other hay of any kind, and cereal straw, as such, as packing material, or for any other purpose, when grown or stored in the infested areas, is prohibited except under certificate as specified below.

Hay and straw may be admitted into Kentucky from the infested areas when inspected and certified by a State or Federal inspector as free from alfalfa weevil, loaded in trucks, cars, or other vehicles free from infestation, and accompanied by a valid copy of a certificate to this effect.

Shipments of alfalfa meal and chopped alfalfa hay may be moved into Kentucky from the infested areas only when accompanied by a certificate to the effect that they were produced, maintained, and handled as specified in the quarantine so as to prevent their becoming infested with the weevil. Chopped alfalfa hay must be chopped and shipped during the period December 1 through March 15.

Any hay and cereal straw produced in the infested areas may move into Kentucky when accompanied by certification that they have been fumigated with methyl bromide, as specified, under supervision of a State or Federal inspector and shipped in vehicles found free from the weevil.

Certificates must be in triplicate signed by the official inspector of the State of origin or his authorized representative. Upon issuance the original certificate must be mailed to the State Entomologist, Lexington, Kentucky; the duplicate copy must be attached to each car, truck, or container of the regulated product; and the triplicate copy must be attached to the waybill. Certificates must show names and addresses of consignor and consignee, date of shipment, number of car or license number of truck, and name of railroad or owner of truck or other vehicle.

Infested Areas

Arizona	Montana	South Dakota
California	Nebraska	Utah
Colorado	Nevada	Wyoming
Idaho	Oregon	

The foregoing summary was checked and approved on April 13, 1951, by W. A. Price, State Entomologist.
